An attempt was made to classify chromospheric flares  
on the basis of their relationship with prominences.  
Observations were made, during the period of 1958-1960,  
using a chromospheric telescope, a spectroheliograph,  
and a microphotometer. The most effective method of  
studying the dynamics of flares was found to be with  
motion-picture photography. The observations show

A study was made of the mechanical properties of  
polyhexamethylene adipamide over a wide range of  
temperatures. Anomalies were found in the tempera-  
ture dependence of the deformability and recrystalliza-  
tion stress in the interval 180 - 190°C. The anom-  
alies are associated with the kinetics of crystalliza-  
tion and recrystallization of the polymer. (Author)

Polyethyleneterephthalate on irradiation with fast  
electrons goes over from the crystalline to the amor-  
phous state. This amorphisation is associated with  
the isomerization of certain portions of the polymer
